Continuation of 11. does NOT place the application in condition for allowance because: The rejections based at least in part upon Nakanishi et al. or Kimura et al. JP 62-209741 have been obviated. The double patenting rejections have been overcome. The rejections based over Kojima et al. in view of Kimura et al. JP 02-147288 and Kojima et al. in view of Yamada et al. JP 63-225935 remain. The applicant argues benefits realized by the claimed invention. These benefits are realized for the media formed in the examples which have grooved substrates (reduces crosstalk between tracks), a reflective layer, thin dielectric layer, boundary layer, recording layer, a second dielectric layer and a UV curable protective layer where the heat is dissipated through the reflective layer via the thin dielectric layer to facilitate rapid cooling and functionality at higher linear velocities (it is actually known as a rapiid colling structure). Therefore tha data at hand is not commensurate in scope with the coverage sought and canot serve the obviate the rejection of record. The examiner withdraws the rejection based in part upon Kondo et al. as superfluous.
